

# CS1028 Practical 1

---

Bob Duncan

2019/20 - Week 8 - W/c 16th September, 2019

## 1 CHANGE TO THIS WEEK'S PRACTICAL 1

It turned out that students are unable to download the information required to set up their own Python programming environment. This means without the proper environment, we will have a difficulty in completing much of the planned Practical session for this week. Accordingly, I have made a change to the planned Practical. Instead, since we are running the practicals in computer labs, we will do the online free tutorial from the World Wide Web Consortium (W3C) on Python programming.

You will see from the link that there are a great list of steps on the left hand side of the screen. Many of these we will not be covering until later lectures. I would suggest you simply take the tutorial one section at a time. Repeat each section as required until you fully understand each step. You can ask the demonstrators if you have any questions.

Here is the link for the tutorial:

[https://www.w3schools.com/python/python\\_getstarted.asp](https://www.w3schools.com/python/python_getstarted.asp)

Keep your eyes out. I will be adding a Resources section to MyAberdeen, and I will add lots of useful information and links for you to check out throughout the course.
